Decision Forests for Computer Vision and Medical Image Analysis (Advances in Computer Vision and Pattern Recognition) From Springer

This practical and easy-to-follow text explores the theoretical underpinnings of decision forests, organizing the vast existing literature on the field within a new, general-purpose forest model. Topics and features: with a foreword by Prof. Y. Amit and Prof. D. Geman, recounting their participation in the development of decision forests; introduces a flexible decision forest model, capable of addressing a large and diverse set of image and video analysis tasks; investigates both the theoretical foundations and the practical implementation of decision forests; discusses the use of decision forests for such tasks as classification, regression, density estimation, manifold learning, active learning and semi-supervised classification; includes exercises and experiments throughout the text, with solutions, slides, demo videos and other supplementary material provided at an associated website; provides a free, user-friendly software library, enabling the reader to experiment with forests in a hands-on manner.

Editorial Review

Review

From the reviews:

“This book is a comprehensive presentation of the theory and use of decision forests in a wide range of applications, centered on computer vision and medical imaging. The book is strikingly well integrated. ... This is an excellent volume on the concept, theory, and application of decision forests. ... I highly recommend it to those currently working in the field, as well as researchers desiring an introduction to the application of random forests for imaging applications.” (Creed Jones, Computing Reviews, March, 2014)

From the Back Cover

Decision forests (also known as random forests) are an indispensable tool for automatic image analysis.

This practical and easy-to-follow text explores the theoretical underpinnings of decision forests, organizing the vast existing literature on the field within a new, general-purpose forest model. A number of exercises encourage the reader to practice their skills with the aid of the provided free software library. An international selection of leading researchers from both academia and industry then contribute their own perspectives on the use of decision forests in real-world applications such as pedestrian tracking, human body pose estimation, pixel-wise semantic segmentation of images and videos, automatic parsing of medical 3D scans, and detection of tumors. The book concludes with a detailed discussion on the efficient implementation of decision forests.

Topics and features:

- With a foreword by Prof. Yali Amit and Prof. Donald Geman, recounting their participation in the development of decision forests
- Introduces a flexible decision forest model, capable of addressing a large and diverse set of image and video analysis tasks
- Investigates both the theoretical foundations and the practical implementation of decision forests
- Discusses the use of decision forests for such tasks as classification, regression, density estimation, manifold learning, active learning and semi-supervised classification
- Includes exercises and experiments throughout the text, with solutions, slides, demo videos and other supplementary material provided at an associated website
- Provides a free, user-friendly software library, enabling the reader to experiment with forests in a hands-on manner

With its clear, tutorial structure and supporting exercises, this text will be of great value to students wishing to learn the basics of decision forests, researchers wanting to become more familiar with forest-based learning, and practitioners interested in exploring modern and efficient image analysis techniques.

Dr. A. Criminisi and **Dr. J. Shotton** are Senior Researchers in the Computer Vision Group at Microsoft Research Cambridge, UK.

Users Review

From reader reviews:

Catherine Gabel:

What do you concerning book? It is not important along? Or just adding material when you want something to explain what the ones you have problem? How about your extra time? Or are you busy man? If you don't have spare time to accomplish others business, it is make you feel bored faster. And you have free time? What did you do? Every person has many questions above. They have to answer that question simply because just their can do that will. It said that about book. Book is familiar on every person. Yes, it is appropriate. Because start from on jardín de infancia until university need that Decision Forests for Computer Vision and Medical Image Analysis (Advances in Computer Vision and Pattern Recognition) to read.

Charles Wright:

Information is provisions for individuals to get better life, information currently can get by anyone from everywhere. The information can be a information or any news even a concern. What people must be consider while those information which is inside former life are challenging be find than now could be taking seriously which one is suitable to believe or which one often the resource are convinced. If you get the unstable resource then you get it as your main information we will see huge disadvantage for you. All those possibilities will not happen within you if you take Decision Forests for Computer Vision and Medical Image Analysis (Advances in Computer Vision and Pattern Recognition) as the daily resource information.

Jeffrey Dominguez:

Your reading 6th sense will not betray anyone, why because this Decision Forests for Computer Vision and Medical Image Analysis (Advances in Computer Vision and Pattern Recognition) e-book written by well-known writer whose to say well how to make book that can be understand by anyone who else read the book. Written in good manner for you, dripping every ideas and publishing skill only for eliminate your personal hunger then you still question Decision Forests for Computer Vision and Medical Image Analysis (Advances in Computer Vision and Pattern Recognition) as good book but not only by the cover but also from the content. This is one reserve that can break don't assess book by its protect, so do you still needing one more sixth sense to pick this kind of!? Oh come on your looking at sixth sense already told you so why you have to listening to an additional sixth sense.

Catherine Benavidez:

As we know that book is vital thing to add our expertise for everything. By a e-book we can know everything we really wish for. A book is a group of written, printed, illustrated or blank sheet. Every year had been exactly added. This guide Decision Forests for Computer Vision and Medical Image Analysis (Advances in Computer Vision and Pattern Recognition) was filled concerning science. Spend your extra time to add your knowledge about your scientific disciplines competence. Some people has different feel when they reading a new book. If you know how big advantage of a book, you can experience enjoy to read a e-book. In the

modern era like at this point, many ways to get book you wanted.
