Fundamental Research in Ultra High Dilution and Homoeopathy From Springer

Jurgen Schulte and Christian Endler met in 1990 at an international conference on the Structure of Water held in the Lecture Halls of the University of Graz (Austria). Disappointed by the lack of a systematic strategy of research into the physics of homoeopathy Jurgen Schulte started to work on the establishment of scientifically acceptable research standards in physics of homoeopathy and encouraged academic researchers to establish a coordinated and focused research strategy. In 1994, with the help of major representatives of the international research community, they edited one of the first academic interdisciplinary books on Ultra High Dilution and homoeopathy that underwent a rigorous scientific international referee process before publishing. Due to the dedicated help of the prominent referees (BD Josephson, Nobel Laureate, Cavendish Lab. , Cambridge; M Bastide, Fac de Pharmacy, University Montpellier; RG Jahn, Aerospace Science, Princeton University), the book 1994 was quickly considered a mile stone and turning point for the scientific approach of research into Ultra High Dilution and homoeopathy. Since then the academic research community has grown considerably and many international conferences have been held. Today, research into homoeopathy is to be accepted by the European Union as part of the academic sciences, worthy to be funded at European Union level; an effort that took many years of research coordination and research strategy development. Excerpts of the Research Strategy of the European Committee for Homoeopathy (ECH) have been included in this book.
