**The Linear Complementarity Problem (Classics in Applied Mathematics)**
By Richard W. Cottle, Jong-Shi Pang, Richard E. Stone

Awarded the Frederick W. Lanchester Prize in 1994 for its valuable contributions to operations research and the management sciences, this mathematically rigorous book remains the standard reference on the linear complementarity problem. Its comprehensive treatment of the computation of equilibria arising from engineering, economics, and finance, plus chapter-ending exercises and *Notes and References* sections make it equally useful for a graduate-level course or for self-study. For this new edition the authors have corrected typographical errors, revised difficult or faulty passages, and updated the bibliography.

**Audience:** This book is intended for researchers and graduate students in various fields including optimization, game theory, and finance, and diverse engineering disciplines, especially computer science and mechanical engineering.

**Contents:** Preface to the Classics Edition; Preface; Glossary of Notation; Numbering System; Chapter 1: Introduction; Chapter 2: Background; Chapter 3: Existence and Multiplicity; Chapter 4: Pivoting Methods; Chapter 5: Iterative Methods; Chapter 6: Geometry and Degree Theory; Chapter 7: Sensitivity and Stability Analysis; Bibliography; Index.

## Editorial Review

About the Author
**Richard W. Cottle** is Professor Emeritus of the Department of Management Science and Engineering at Stanford University. His main research interests are complementarity theory, linear and nonlinear programming, and matrix theory.

**Jong-Shi Pang** is the Caterpillar Professor and Head of the Department of Industrial and Enterprise Systems Engineering at the University of Illinois at Urbana-Champaign. He won the 2003 George B. Dantzig Prize awarded jointly by the Mathematical Programming Society and SIAM for his work on finite-dimensional variational inequalities.

**Richard E. Stone** is a Principal in Information Technology at Delta Air Lines. He worked in academia as Assistant Professor in the Graduate School of Business Administration at Harvard University before his initial job in industry at AT&T Bell Laboratories, where he was employed when this book was written.

## Users Review

**From reader reviews:**

**Agnes Higa:**

Do you have favorite book? If you have, what is your favorite's book? E-book is very important thing for us to be aware of everything in the world. Each publication has different aim or goal; it means that reserve has different type. Some people truly feel enjoy to spend their time for you to read a book. They are really reading whatever they take because their hobby is definitely reading a book. Consider the person who don't like reading through a book? Sometime, individual feel need book when they found difficult problem or maybe exercise. Well, probably you will require this The Linear Complementarity Problem (Classics in Applied Mathematics).

**Gail Kernan:**

Spent a free time and energy to be fun activity to complete! A lot of people spent their sparetime with their family, or their very own friends. Usually they doing activity like watching television, gonna beach, or picnic inside the park. They actually doing same every week. Do you feel it? Do you need to something different to fill your current free time/ holiday? Could possibly be reading a book is usually option to fill your free time/ holiday. The first thing that you ask may be what kinds of reserve that you should read. If you want to try look for book, may be the guide untitled The Linear Complementarity Problem (Classics in Applied Mathematics) can be good book to read. May be it can be best activity to you.

**Crystal McMullen:**

Reading a book to get new life style in this 12 months; every people loves to study a book. When you learn a book you can get a large amount of benefit. When you read books, you can improve your knowledge, simply because book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you wish to get information about your examine, you can read education books, but if you want to entertain yourself read a fiction books, these kinds of us novel, comics, in addition to soon. The The Linear Complementarity Problem (Classics in Applied Mathematics) will give you a new experience in reading through a book.

**Katie Grossi:**

In this particular era which is the greater man or who has ability to do something more are more precious than other. Do you want to become one of it? It is just simple solution to have that. What you have to do is just spending your time very little but quite enough to enjoy a look at some books. Among the books in the top checklist in your reading list will be The Linear Complementarity Problem (Classics in Applied Mathematics). This book and that is qualified as The Hungry Slopes can get you closer in turning into precious person. By looking up and review this e-book you can get many advantages.
