**Derivative Securities and Difference Methods (Springer Finance)** By You-lan Zhu, Xiaonan Wu, I-Liang Chern, Zhi-zhong Sun

This book is mainly devoted to finite difference numerical methods for solving partial differential equations (PDEs) models of pricing a wide variety of financial derivative securities. With this objective, the book is divided into two main parts.

In the first part, after an introduction concerning the basics on derivative securities, the authors explain how to establish the adequate PDE boundary value problems for different sets of derivative products (vanilla and exotic options, and interest rate derivatives). For many option problems, the analytic solutions are also derived with details. The second part is devoted to explaining and analyzing the application of finite differences techniques to the financial models stated in the first part of the book. For this, the authors recall some basics on finite difference methods, initial boundary value problems, and (having in view financial products with early exercise feature) linear complementarity and free boundary problems. In each chapter, the techniques related to these mathematical and numerical subjects are applied to a wide variety of financial products. This is a textbook for graduate students following a mathematical finance program as well as a valuable reference for those researchers working in numerical methods in financial derivatives. For this new edition, the book has been updated throughout with many new problems added. More details about numerical methods for some options, for example, Asian options with discrete sampling, are provided and the proof of solution-uniqueness of derivative security problems and the complete stability analysis of numerical methods for two-dimensional problems are added.

Review of first edition:

“...the book is highly well designed and structured as a textbook for graduate students following a mathematical finance program, which includes Black-Scholes dynamic hedging methodology to price financial derivatives. Also, it is a very valuable reference for those researchers working in numerical methods in financial derivatives, either with a more financial or mathematical background.” - MATHEMATICAL REVIEWS

## **Editorial Review**

### Review

"It is mainly devoted to finite difference methods, and it is intended for researchers as well as graduate students. It is the most complete and useful book on the subject I have seen. ... Derivative Securities and Difference Methods is a really good book that anyone studying or working in this field should own." (Anita Mayo, *SIAM Review*, Vol. 57 (1), March, 2015)

"This book is devoted to pricing financial derivatives with a partial differential equation approach. It has two parts, each with four chapters. ... The book covers a variety of topics in finance, such as forward and futures contracts, the Black-Scholes model, European and American type options, free boundary problems, barrier options, lookback options, multi-asset options, interest rate models, interest rate derivatives, swaps, swaptions, caps, floors, and collars. The treatment is mathematically rigorous. There are exercises at the end of each chapter." (Elias Shiu, *Zentralblatt MATH*, Vol. 1061 (12), 2005)

"This book is mainly devoted to finite difference numerical methods for solving partial differential equations (PDEs) models of pricing a wide variety of financial derivative securities... the book is highly well designed and structured as a textbook for graduate students following a mathematical finance program, which includes Black-Scholes dynamic hedging methodology to price financial derivatives. Also, it is a very valuable reference for those researchers working in numerical methods in financial derivatives, either with a more financial or mathematical background." -- MATHEMATICAL REVIEWS

### From the Back Cover

This book is mainly devoted to finite difference numerical methods for solving partial differential equation (PDE) models of pricing a wide variety of financial derivative securities. With this objective, the book is divided into two main parts.

In the first part, after an introduction concerning the basics on derivative securities, the authors explain how to establish the adequate PDE initial/initial-boundary value problems for different sets of derivative products (vanilla and exotic options, and interest rate derivatives). For many option problems, the analytic solutions are also derived with details. The second part is devoted to explaining and analyzing the application of finite differences techniques to the financial models stated in the first part of the book. For this, the authors recall some basics on finite difference methods, initial boundary value problems, and (having in view financial products with early exercise feature) linear complementarity and free boundary problems. In each chapter, the techniques related to these mathematical and numerical subjects are applied to a wide variety of financial products.

This is a textbook for graduate students following a mathematical finance program as well as a valuable reference for those researchers working in numerical methods of financial derivatives. For this new edition, the book has been updated throughout with many new problems added. More details about numerical methods for some options, for example, Asian options with discrete sampling, are provided and the proof of solution-uniqueness of derivative security problems and the complete stability analysis of numerical methods for two-dimensional problems are added.

Review of first edition:

“...the book is highly well designed and structured as a textbook for graduate students following a mathematical finance program, which includes Black-Scholes dynamic hedging methodology to price financial derivatives. Also, it is a very valuable reference for those researchers working in numerical methods in financial derivatives, either with a more financial or mathematical background.” --

About the Author

You-Lan Zhu is a Professor of Mathematics at the University of North Carolina at Charlotte. Xiaonan Wu is a Professor of Mathematics at Hong Kong Baptist University. I-Liang Chern is a Professor of Mathematics at National Taiwan University. Zhi-zhong Sun is a Professor of Mathematics at Southeast University.

## **Users Review**

**From reader reviews:**

**Victor Kohlmeier:**

Hey guys, do you want to find a new book to read? Maybe the book with the concept Derivative Securities and Difference Methods (Springer Finance) suitable to you? The actual book was written by well known writer in this era. The particular book entitled Derivative Securities and Difference Methods (Springer Finance) is the one of several books in which everyone reads now. That book was inspired a number of people in the world. When you read this e-book you will enter the new age that you never knew before. The author explained their plan in the simple way, thus all of people can easily recognize the core of this book. This book will give you a wide range of information about this world now. To help you to see the represented of the world on this book.

**David Binkley:**

Reading a guide can be one of a lot of action that everyone in the world loves. Do you like reading books thus. There are a lot of reasons why people love it. First reading a publication will give you a lot of new details. When you read a review you will get new information due to the fact book is one of numerous ways to share the information as well as their idea. Second, examining a book will make you more imaginative. When you read a book especially fictional book the author will bring someone to imagine the story how the figures do it anything. Third, you can share your knowledge to other individuals. When you read this Derivative Securities and Difference Methods (Springer Finance), it is possible to tell your family, friends in addition to soon about your guide. Your knowledge can inspire the others, make them read a book.

**David Ramos:**

The e-book entitled Derivative Securities and Difference Methods (Springer Finance) is the review that recommended to you to learn. You can see the quality of the book content that will be shown to you actually. The language that writer use to explain their way of doing something is easily to understand. The article

writer was did a lot of investigation when write the book, to ensure the information that they share to your account is absolutely accurate. You also can get the e-book of Derivative Securities and Difference Methods (Springer Finance) from the publisher to make you much more enjoy free time.

**Gerald Sosa:**

Playing with family inside a park, coming to see the coastal world or hanging out with friends is thing that usually you may have done when you have spare time, after that why you don't try matter that really opposite from that. A single activity that make you not experience tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of information. Even you love Derivative Securities and Difference Methods (Springer Finance), you may enjoy both. It is excellent combination right, you still wish to miss it? What kind of hang-out type is it? Oh can occur its mind hangout guys. What? Still don't buy it, oh come on its referred to as reading friends.
